

Table of Contents for ECE 220 Video Lectures		
Lab videos are listed at the bottom of this document		
	Video Number	Contents
Chapter 1		
	220_1.001	Definition of work, energy, charge, voltage
	220_1.002	Definition of current, power
	220_1.003	Example: current from charge
	220_1.004	Integrating current to get charge
	220_1.005	Example
	220_1.006	Intuition
	220_1.007	Integrating power to get energy, with example
	220_1.008	Average power, with example
	220_1.009	Basic circuit elements, voltage across (with polarity), current through (with direction)
	220_1.010	Calculating power absorbed, with sign convention
	220_1.011	Examples
	220_1.012	Power balance (check) equation
Chapter 2		
	220_2.001	Basic circuit elements, ideal voltage sources, ideal current sources
	220_2.002	Controlled (dependent) sources
	220_2.003	Valid and invalid connections with examples
	220_2.004	More examples
	220_2.005	Ideal resistors, Ohm's law with sign convention
	220_2.006	Ohm's law examples, conductance (reciprocal of resistance)
	220_2.007	Resistor color code
	220_2.008	Ideal wire
	220_2.009	$p = i^2/R = v^2/R$
	220_2.010	Examples
	220_2.011	Example - sources can absorb power
	220_2.012	Kirchhoff's current law (KCL)
	220_2.013	KCL for super nodes
	220_2.014	Kirchhoff's voltage law (KVL)
	220_2.015	Example - KVL with airgaps
	220_2.016	Example - solving circuits by "sudoku"
	220_2.017	More examples
	220_2.018	More examples
	220_2.019	More examples - two equations with two unknowns
	220_2.020	More examples
	220_2.021	Valid/invalid connections (revisited) with examples
	220_2.022	More examples
	220_2.023	More realistic source models
	220_2.024	Realistic resistance, $p_{max}$ , $i_{max}$ , $v_{max}$
Chapter 3		
	220_3.001	Series connection - circuit elements have the same current through them
	220_3.002	Series resistors - equivalent resistance
	220_3.003	Parallel connections - circuit elements have the same voltage across them
	220_3.004	Parallel resistors - equivalent resistance
	220_3.005	Examples
	220_3.006	Voltage divider
	220_3.007	Examples
	220_3.008	Potentiometer - variable voltage divider
	220_3.009	Current divider
	220_3.010	Examples
	220_3.011	More equivalent resistance examples - depends on the two points chosen for measurement
	220_3.012	Introduction to Delta and Wye conversions
	220_3.013	Delta and wye - the general equations
	220_3.014	Examples - using the general formulas
	220_3.015	Example - doing conversions within a larger circuit

	220_3.016	Another example - a bridge circuit
	220_3.017	Connecting ammeter (in series)
	220_3.018	Connecting voltmeter (in parallel)
	220_3.019	d'Arsonval meter movement
	220_3.020	Meter movement specifications
	220_3.021	Making an ammeter
	220_3.022	Making a voltmeter
	220_3.023	Adjustable range meters
	220_3.024	Good meter or bad meter?
	220_3.025	The loading effect - ammeter
	220_3.026	The loading effect - voltmeter
	220_3.027	Ohmmeter
	220_3.028	Wheatstone bridge
	220_3.029	Don't try to measure resistor in circuit!
	220_3.030	Preview - AC circuits (phasor analysis)
	220_3.031	Example
Chapter 4		
	220_4.001	Definition of essential node, mesh, planer circuit
	220_4.002	Examples
	220_4.003	More examples
	220_4.004	Note voltage analysis (NVA)
	220_4.005	Example
	220_4.006	Another example
	220_4.007	But wait! We assumed two different directions for the same current
	220_4.008	Example with voltage source connected to the reference node
	220_4.009	Resistor in series with current source. Resistor in parallel with voltage source.
	220_4.010	An example where we "move" a voltage source so that it's connected to the reference node
	220_4.011	A word about simplifying simultaneous equations
	220_4.012	NVA with controlled sources, with example
	220_4.013	NVA with super nodes, with example
	220_4.014	Example with controlled sources and super nodes, oh my
	220_4.015	Mesh current analysis (MCA)
	220_4.016	Example
	220_4.017	Another example
	220_4.018	Example with current source appearing in only one mesh
	220_4.019	MCA with controlled sources, with example
	220_4.020	Super mesh with example
	220_4.021	Another example
	220_4.022	NVA versus MCA with example
	220_4.023	Another example
	220_4.024	NVA with complex numbers, with example
	220_4.025	MCA with complex numbers, with example
	220_4.026	Series impedances add, parallel impedances added as reciprocals
	220_4.027	Example: complex number current divider
	220_4.028	Thevenin and Norton equivalent circuits
	220_4.029	Source transformations
	220_4.030	Usefulness of equivalent circuits
	220_4.031	Open-circuit voltage
	220_4.032	Short-circuit current
	220_4.033	Three methods to find $R_{Th} = R_{N}$ . 1) Direct method, 2) Kill sources method
	220_4.034	3) Test source method
	220_4.035	Example: $v_{oc}$ , kill sources method
	220_4.036	Same example, but this time: $i_{sc}$ , direct method
	220_4.037	Another example: $i_{sc}$ , can't use kill sources, use direct method
	220_4.038	Another example: $v_{oc}$ , kill sources method
	220_4.039	Another example: $i_{sc}$ , kill sources method
	220_4.040	Example: test source method (method 3)
	220_4.041	Another test source method example

	220_4.042	Example with no independent sources
	220_4.043	Example Continued: Only the test source method will work
	220_4.044	Example with the two terminals (a and b) in the middle of the circuit
	220_4.045	Equivalent circuits with complex numbers
	220_4.046	Maximum power transfer, $R_L = R_{Th}$
	220_4.047	$P_{max} = ((V_{Th})^2)/4$
	220_4.048	Example
	220_4.049	Superposition/linearity
	220_4.050	Using superposition- procedure
	220_4.051	Example
	220_4.052	Example: continued
	220_4.053	Another example
	220_4.054	Another example
	220_4.055	Same example, but with "what if's"
	220_4.056	Superposition with complex numbers
Chapter 5		
	220_5.001	Op amps, example: $\mu A741$ , circuit symbol, importance of power supplies
	220_5.002	Op amp amplifies voltage by large gain A, output voltage limited by power supply
	220_5.003	Linear region, saturation region, for linear region, $v_p = v_n$ (approximately)
	220_5.004	Op amps have large input impedance, $i_p = i_n = 0$ (approximately), $i_o$ comes from power supplies
	220_5.005	Summary, restrictions on power supplies, $V_{cc}$
	220_5.006	Practical circuits, inverting amplifier, negative feedback
	220_5.007	Classical analysis of inverting amplifier
	220_5.008	Dependence on linearity assumption
	220_5.009	NVA for Op amp circuits, Example on inverting amp, The output voltage does not depend on $R_L$
	220_5.010	Sinusoidal input to inverting amplifier, with and without saturation
	220_5.011	Thevenin voltage looking into the input of the inverting amplifier
	220_5.012	Thevenin resistance looking into the input of the inverting amplifier
	220_5.013	Thevenin parameters looking into the output of the inverting amplifier
	220_5.014	Summing amplifier
	220_5.015	Example: audio mixing board
	220_5.016	Example: digital-to-analog (D/A) converter
	220_5.017	Non-inverting amplifier
	220_5.018	Different way to draw, advantages, disadvantages
	220_5.019	Difference amplifier
	220_5.020	Difference amplifier (continued)
	220_5.021	Difference amplifier with equal weights
	220_5.022	Application: heart monitor, Common mode rejection ratio (CMRR)
	220_5.023	Instrumentation amplifier
	220_5.024	Application: strain gauge
	220_5.025	Strain gauge (continued)
	220_5.026	Application: amplifying acoustic instrument (e.g., guitar or violin)
	220_5.027	Voltage follower (buffer)
	220_5.028	Application: isolate two circuits
	220_5.029	Good voltmeter
	220_5.030	Trans-amplifier (current to voltage converter)
	220_5.031	Application: carbon monoxide sensor
	220_5.032	Where do controlled (dependent) sources come from?
	220_5.033	Calculating load current, this comes mostly from power supplies up
	220_5.034	So how good are these approximations? Better Op amp model
	220_5.035	Inverting amplifier with better op amp model
	220_5.036	Comparison of the two models with respect to calculation of the output voltage
	220_5.037	Comparison of the two models with respect Thevenin parameters
	220_5.038	Saturation of the inverting amp, Calculating $v_n$ --- which is not equal to $v_p$
	220_5.039	Saturation of the non-inverting amp
	220_5.040	Maximum op amp output current, minimum load impedance
	220_5.041	Nonlinear circuits (on purpose), the comparator
	220_5.042	Application: low-voltage warning light

	220_5.043	Application: flash A/D converter
	220_5.044	Noise, chatter, Schmitt trigger
	220_5.045	Positive feedback, analysis of the Schmitt trigger
	220_5.046	Output voltage versus input voltage (graph), hysteresis loop
	220_5.047	Example: Schmitt trigger eliminates chatter
Chapter 6		
	220_6.001	Inductors, energy storage, magnetic field, voltage is proportional to the derivative of current
	220_6.002	Sign convention, example
	220_6.003	Examples, inductor current cannot change instantaneously
	220_6.004	Integrate voltage to get current, the need for initial condition (current)
	220_6.005	Examples, can have nonzero current with zero voltage
	220_6.006	Power, energy, $w=(1/2)Li^2$
	220_6.007	Example
	220_6.008	Example continued
	220_6.009	Stored energy is positive, power absorbed can be positive or negative
	220_6.010	Series and parallel inductors
	220_6.011	KVL (mesh current analysis) with inductors
	220_6.012	Capacitors, energy storage, electric field, current proportional to derivative of voltage, sign convention
	220_6.013	Examples, capacitor voltage cannot change instantaneously
	220_6.014	Integrate current to get voltage, the need for initial condition (voltage), relation to charge
	220_6.015	Example
	220_6.016	Graphs from example, can have nonzero voltage with zero current
	220_6.017	Power, energy, $w=(1/2)Cv^2$
	220_6.018	Series and parallel capacitors
	220_6.019	Mutual inductance, two coils wound on one core, induced voltage, sign convention
	220_6.020	Example with inductance, but not mutual inductance
	220_6.021	Example with mutual inductance
	220_6.022	Another example
	220_6.023	Another example
	220_6.024	Where do dots come from?, determining dots from coil windings
	220_6.025	Example
	220_6.026	Determining dots from lab experiment
	220_6.027	Inductance versus turns, $L=PN^2$ , coupling coefficient $k$ , $M=k*\sqrt{L_1*L_2}$ , turns ratio
Chapter 7		
	220_7.001	First-order constant coefficient differential equation, solution is exponential
	220_7.002	Importance of initial value, natural response, homogeneous solution, due to initial conditions
	220_7.003	Natural response of first order RL circuit, inductor current cannot change instantaneously
	220_7.004	First solve for inductor current, then anything else, time constant = $L/R$
	220_7.005	Example continued, find power and energy
	220_7.006	Example continued, notes and insight
	220_7.007	More on the time constant, transient response is over after five time constants
	220_7.008	Example with numbers
	220_7.009	Natural response of first order RC circuit, capacitor voltage cannot change instantaneously
	220_7.010	First solve for capacitor voltage, then anything else, time constant = $RC$
	220_7.011	Example with numbers
	220_7.012	Step response, particular solution, due to source
	220_7.013	Example RL circuit
	220_7.014	Example continued, notes and insight
	220_7.015	Example RC circuit
	220_7.016	The general solution (Natural and/or step response), the FIFE equation
	220_7.017	Example RC circuit
	220_7.018	Another RC example
	220_7.019	Example RL circuit
	220_7.020	Another RL example
	220_7.021	Pulsed source example
	220_7.022	Sequential switching example
	220_7.023	Sequential switching example continued
	220_7.024	Sequential switching example continued

	220_7.025	Integrator circuit
	220_7.026	Final notes
Chapter 8		
	220_8.001	Second-order constant coefficient differential equation, $\alpha$ , $\omega_0$ , three cases
	220_8.002	case I, $\alpha^2 > \omega_0^2$ , form of natural response solution, characteristic polynomial/roots
	220_8.003	constants for solution ( $A_1, A_2$ ), always use $t_0^+$
	220_8.004	case II, $\alpha^2 < \omega_0^2$ , form of solution, characteristic roots, the constants ( $B_1, B_2$ )
	220_8.005	case III, $\alpha^2 = \omega_0^2$ , form of solution, characteristic roots, the constants ( $D_1, D_2$ )
	220_8.006	summary of natural response
	220_8.007	overdamped, underdamped, critically damped, speed vs overshoot
	220_8.008	door analogy
	220_8.009	natural response applied to parallel RLC circuit
	220_8.010	parallel RLC continued, $\alpha=1/(2RC)$ , $\omega_0=1/\sqrt{LC}$ , neper freq, resonant freq
	220_8.011	$\omega_d$ =damped freq, undamped, tank circuit
	220_8.012	example with numbers (underdamped)
	220_8.013	example continued
	220_8.014	example continued
	220_8.015	example continued
	220_8.016	Another example with numbers (critically damped)
	220_8.017	example continued
	220_8.018	example continued
	220_8.019	2nd order diff eq general solution (step response with initial conditions), skip step response, case
	220_8.020	case II and case III
	220_8.021	general solution applied to parallel RLC
	220_8.022	Example with numbers (overdamped)
	220_8.023	example continued
	220_8.024	Another example (underdamped)
	220_8.025	example continued
	220_8.026	example continued
	220_8.027	series RLC, skip natural and step, go straight to general solution, $\alpha=R/(2L)$ , $\omega_0$ same as before
	220_8.028	example with numbers (overdamped)
	220_8.029	example continued
	220_8.030	example - ignition system (underdamped)
	220_8.031	example continued
	220_8.032	example continued
	220_8.033	summary, finding initial condition derivatives
Chapter 9		
	220_9.001	sinusoidal steady-state
	220_9.002	preliminaries, amplitude, phase, frequency, period
	220_9.003	notes, phase restrictions, "advanced" cosines
	220_9.004	notes continued, "delayed" cosines, writing a sin as a cosine
	220_9.005	phase relationships, "leading", "lagging"
	220_9.006	mixing radians and degrees, converting from one to the other
	220_9.007	root mean squared (RMS) voltage
	220_9.008	example, phase relationships and RMS
	220_9.009	leading and lagging measured in seconds
	220_9.010	complex sinusoid (complex exponential) in RL circuits
	220_9.011	continued
	220_9.012	real sinusoids in RL circuits
	220_9.013	phasors, shorthand notation for the real part of a complex exponential
	220_9.014	example, adding two sinusoids
	220_9.015	phasor version of Ohm's law for resistors
	220_9.016	phasor version of Ohm's law for inductors
	220_9.017	phasor version of Ohm's law for capacitors, table of impedances
	220_9.018	impedance, resistance, reactance, admittance, conductance, susceptance
	220_9.019	phase relationship for resistors, inductors, capacitors, ELI the ICE man, ELI
	220_9.020	ICE, phasor diagrams
	220_9.021	more phasor diagram examples, leading, lagging

	220_9.022	KVL and KCL for phasors
	220_9.023	series impedance
	220_9.024	parallel impedance
	220_9.025	example, equivalent impedance, Wye/Delta
	220_9.026	another example, reactance (imaginary part of impedance) can cancel
	220_9.027	another example, resonant frequency
	220_9.028	example continued, resonance can create large voltages
	220_9.029	example, NVA with phasors
	220_9.030	example, MCA with phasors
	220_9.031	Thevenin/Norton with phasors
	220_9.032	mutual inductance, simultaneous diff equations replaced by complex linear equations, example
	220_9.033	ideal transformers, voltage relationship, turns ratio
	220_9.034	current relationship, inverse of turns ratio
	220_9.035	100% power transfer, only turns ratio needed to solve ideal transformer problems
	220_9.036	example
	220_9.037	sign convention, be careful with I2
	220_9.038	application, power delivery, effect on impedance, inverse of turns ratio square
	220_9.039	application, multiple speakers in parallel
	220_9.040	example, power divided equally
	220_9.041	example, equivalent impedance
	220_9.042	another example, via sudoku
	220_9.043	same example via MCA
	220_9.044	frequency response, transfer function, magnitude response, phase response
	220_9.045	example, low pass filter
	220_9.046	low pass filter, more general
	220_9.047	sketch of magnitude response and phase response, cut-off frequency
	220_9.048	example, high pass filter, sketches
	220_9.049	example, band pass filter
	220_9.050	example, band reject filter
	220_9.051	application, bass and treble controls
	220_9.052	am radio, transmitter
	220_9.053	am radio, receiver, tuning
	220_9.054	am radio receiver, concluded
	220_9.055	ac/dc conversion, rectifiers, half wave, full wave
Lab Videos		
Orientation		
	Orientation_1	How to watch videos
	Orientation_2	Breadboard
	Orientation_3	Analog Discovery 2 Software (Waveforms)
	Orientation_4	Analog Discovery 2 (AD2) connector
	Orientation_5	AD2 voltage sources
	Orientation_6	Digital Multimeter (DMM): voltmeter
	Orientation_7	DMM: ohmmeter
	Orientation_8	DMM: ammeter
	Orientation_9	Voltage divider
Lab1		
	No videos	
Lab2		
	Lab2_1	Function (waveform) generators
	Lab2_2	Function generators (continued)
	Lab2_3	Oscilloscope connections
	Lab2_4	Oscilloscope - measuring waveform generators
	Lab2_5	Oscilloscope - triggering
	Lab2_6	Oscilloscope - triggering (continued)
	Lab2_7	Oscilloscope - voltage divider
	Lab2_8	Oscilloscope - coupling (DC/AC)

Lab3		
	Lab3_1	Op Amp power rails using the AD2
	Lab3_2	Op Amp power rails using the AD2 (continued)
Lab4		
	Lab4_1	Polarized capcitors
Lab 5		
	No videos
