This assignment ensures that you can load the SDK and emulate (or simulate) a simple application that you create. *Use concepts of good style and object-oriented design (as much as you know them) when you complete this assignment.* As always, document your code thoroughly.

All the below solutions should be contained in a single application.

1. **Your Face Here (10 points)**

   Create an application that shows an image of your face (this is called the *image*) when loaded. Touching or rotating the screen should not change the displayed information.

2. **Your Name There (45 points)**

   When the image is tapped, you should clearly display the below text (called the *assignment text*) in the center of the image. Replace your name and course number as appropriate:

   Firstname Lastname
   ECE473 hw01

   Tapping the image again should remove the text.

3. **Hold it, hold it, hold it... (45 points)**

   A long press on the image of your face should change where the text appears: instead of the middle of the screen, the location where you pressed should be used.

**ECE573 Students Only**

Your application should satisfy these additional requirements:

- The entirety of the assignment text should be visible at all times.
- The assignment text should disappear after 3 seconds.
- Double tapping the image should restore the text display location to the center of the image.
